

UltraPET™

UltraPET™ a proprietary carrier system that has excellent compatibility with PET polymers and offers the following benefits:

- **UltraPET™** is based upon Chroma Color's **G3** patented technology that processes at a much lower temperature than conventional PET pellet concentrates.
- Lower process temperatures enables molders to significantly reduce the heat stress on the pigments and dyes.
- **UltraPET™** offers exceptionally high loading of pigments and dyes, which allows processors significant economic benefits of low usage rates (LDR).
- In most cases, the extremely low usage rates also eliminates the need for drying and recrystallization that is common to the use of conventional PET pellet concentrates.
- **UltraPET™** concentrates are resistant to alcohol for applications that require that additional benefit and can be formulated to be compliant for FDA regulations.
- **UltraPET™** concentrates reduce housekeeping cost compared to the inherent messiness of liquid color.
- Chroma Color has launched a new version of **UltraPET™** designed specifically for use with recycled material.
