

Color Lab

About our Color Labs

Chroma Color Corporation has state of the art laboratories within each of our six manufacturing sites. Our capabilities include, but not limited to, formulating color / concentrates, additives and pre-colored compounds.

All Chroma Color facilities utilize lab-scale production equipment, industry approved and precise quality control techniques. Our color development and analytical labs are fully dedicated to support your program needs.

Chroma Color Color Matching

- Develop custom and standard colors for customers
- Ensure exact color match is achieved in the specific resin select for the application for consistent run-to-run quality
- Produce accurate color chips and samples for pre-production trial runs

Chroma Color's Analytical Lab

- Use of **advanced technology** to test colors and molecular changes in additives to improve customers product quality
- In-house** statistical analysis to ensure color concentrates meet customers stringent specifications

Chroma Color's Asheboro Lab

Accredited by the American Association for Laboratory Accreditation (A2LA) to meet the requirements set forth in ISO/IEC 17025. Our state-of-the-art testing and production equipment is complimented by the quality and experience of our staff particularly expertise with Drug Master File colors .
