

# ChromaPCRPET

Chroma Color Corporation has developed a unique product line explicitly designed for use with recycled materials. **ChromaPCRPET** allows brand owners to further increase the levels of PCR within their package, supporting increased Sustainability Goals.

Key Features of **ChromaPCRPET** include:

- Fully commercialized for use in injection, extrusion, blow molding, sheet or other polymer applications
- Product is FDA compliant with No Objection Letter (NOL)
- Chroma Color offers correction colors for PCR, along with chain extenders, processing stabilizers and other functional enhancements for recycled PET streams
- Inclusion allows processor to claim 100% PCR content within final product

Chroma Color's patented line-up of **G2®**, **UltraPET®** and **G3®** technologies provide the perfect balance of color, performance and price to address the vast array of PCR resin challenges.

## ChromaTransparent

**UltraPET®**, formulated with **ChromaTransparent** (a patented carrier technology) is a highly loaded color concentrate that delivers both lower costs and greater processing flexibility for brand owners and converters.
