

ChromaFresh

About Chroma Color's ChromaFresh color additive

ChromaFresh color concentrate additive is often used in items such as packaging, toys, household goods, and personal care products to improve the user experience and differentiate products in the marketplace.

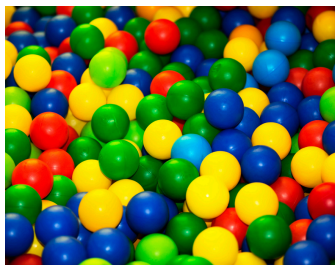

In sectors like automotive, healthcare, or pet products, scented plastics are used to neutralize unpleasant smells or to promote a sense of cleanliness and freshness.

Scents can also mask unwanted odors from recycled materials such as PCR PET and HDPE used for consumer products and more.
